Technician Notes

The Motors Section provides repairs that involve motor replacements of various types and styles. ATTIC FAN, BELT DRIVE, DIRECT DRIVE, POWER-VENTING motors are represented here. CONDENSER FAN motors as well as FAN BLADES, MOTOR SHEAVES, and RAINSHIELDS are also found here.

Motors that use capacitors have them INCLUDED

Technician Notes provide additional and important information regarding repairs included in that portion of the book. Notes might include safety precautions, sizing tips, or other directions to better aid your technician on the service call.

AVOIDING CALL BACKS!

Doubling the speed of a fan to gain more air from a motor. Laws of physics require that if you double the installation you will:

1. Get TWICE the Cubic Feet per Minute (CFM) air flow.
2. Get FOUR times the static pressure in the system.
3. Require EIGHT times the horsepower to maintain the increase in airflow in the system.

This is why it is impractical to attempt to increase airflow without considering how such a change would affect the entire system.

Use the ADDITIONAL sheet at the end of the "General Information" Tab to record field generated flat rate repairs. If you'd like these repairs added to your database, please fax them to 706.327.8786 or email to support@profitstrategies.net.
